# How to Set Up 2FA

1. Log into the website dashboard
2. Navigate to **Users > Your Profile**.

3. Scroll down to the **WordFence Login Security** section and click the **Activate 2FA** button.

You'll be directed to the **Two-Factor Authentication** area.

4. Get out your phone, download, and install the **Google Authenticator** app.

  - Google Authenticator on the iOS App Store
 - Google Authenticator on Android Play Store

  Tap the red + button on the app.

5. Select an option to **scan the QR code** or **input the key** underneath the QR code in your app.

  1. Scan Code or Enter Key

  Scan the code below with your authenticator app to add this account. Some authenticator apps also allow you to type in the text version instead.

  DGJDNLKH5SCLNAPTBQVFZM7IPNF7K6ZN

6. On the app, you will see a 6-digit code for your site which regenerates every thirty seconds.

7. Input the code into the **Authentication Code field** on your site and then press the **Activate** button.
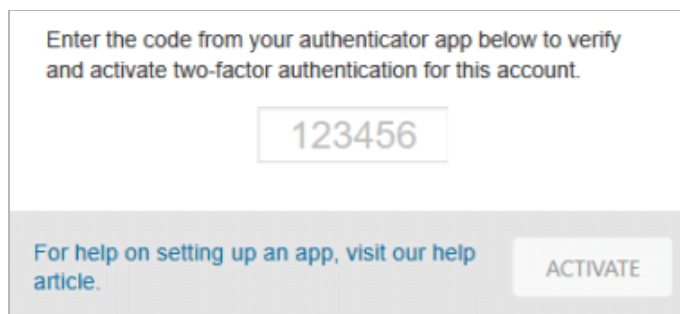

8. You'll be presented with an option to download the recovery keys. Do so. Keep them in a safe place in case you ever need them to log into the website without the Google Authenticator 6-digit code. They act as temporary passwords.
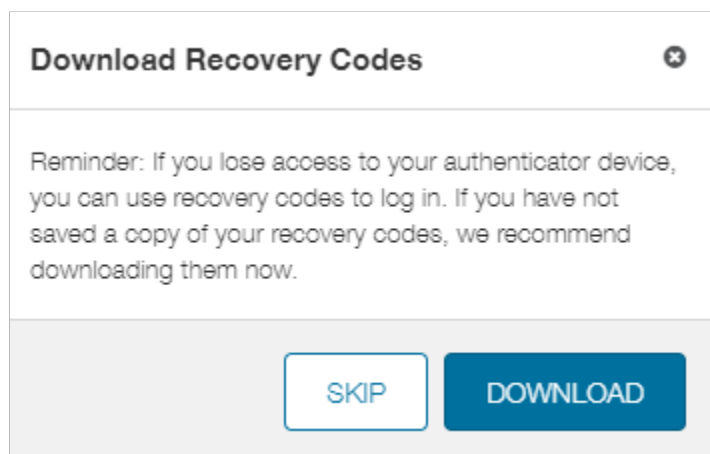

That's It.

The next time you log into your site, there will be an extra step.

After you input your username/email and password, you'll be asked for the 6-digit code generated by the Google Authenticator app on your phone.

If anyone else tries to log in and can't produce the right code, they will not get any further.
